

SOLID STATE

Species Bible - Version 1.1

Refreshed species design. Supersedes Species Bible v1.0.

1. Core Structure

Six starting species share one Human-driven modern society. Species affects morphology, institutional treatment, and soft material-family tendencies. It does not create separate civilizations or deterministic material destinies.

2. Setup

Species is rolled first, followed by ten random talents, selection of exactly three talents, starting attribute allocation, then the automatic life simulation beginning at age 0.

3. Starting Species

Species	zh-TW	Allocation / fixed modifier
Human	人類	21 points; No fixed modifier
Elf	精靈	20 points; CHR +1, INT +1, STR -1
Dwarf	矮人	20 points; STR +2, CHR -1
Winged Kin	翼族	20 points; CHR +1, SPR +1, STR -1
Demonkin	魔裔	20 points; CHR +2, SPR -1
Dragonkin	龍人族	20 points; STR +1, MNY +1, SPR -1

4. Material Tendency Rule

Tendencies are qualitative family-level influences before Material Commitment: Primary, Secondary, Neutral, Uncommon. Hints, manifestations, species tendencies, and talents remain soft evidence. Only Material Commitment hard-locks ordinary future material drafting.

Human - 人類

Starting: No fixed modifier; +1 free allocation point.

Primary: none

Secondary: none

Uncommon: none

Baseline morphology and institutional default. Human has one extra free allocation point rather than fixed stat modifiers.

Elf - 精靈

Starting: CHR +1, INT +1, STR -1.

Primary: CRY, WOOD

Secondary: GLAS, STON, TEMP

Uncommon: METL_INDUSTRIAL, CONCRETE_HEAVY

Wood outcomes should be polished, arboreal, carved, lacquered, sculptural, or otherwise refined; wood is not automatically rustic or cheap.

Dwarf - 矮人

Starting: STR +2, CHR -1.

Primary: STON, METL_INDUSTRIAL

Secondary: BRONZE, CONCRETE, ARC_COMPOSITE, SYNT_INDUSTRIAL

Uncommon: GLAS, CRY_DELICATE

Durable/industrial material associations; Human-scale infrastructure and bureaucracy are recurring social frictions.

Winged Kin - 翼族

Starting: CHR +1, SPR +1, STR -1.

Primary: STON_FINE

Secondary: CRYs, GLAS, TEMP

Uncommon: METL_INDUSTRIAL_CRUDE, CONCRETE_CRUDE

Angel / 天使 is everyday shorthand and scientifically inaccurate. Wings vary in color/functionality; accommodation and symbolic objectification are major event hooks.

Demonkin - 魔裔

Starting: CHR +2, SPR -1.

Primary: GLAS_OBSIDIAN

Secondary: METL_PRECIOUS, MAGICAL_SEAL, TEMP

Uncommon: WOOD_NATURAL

Horns/tails and related traits are not moral indicators. Bureaucratic danger assumptions and ceremonial symbolism provide event hooks.

Dragonkin - 龍人族

Starting: STR +1, MNY +1, SPR -1.

Primary: METL_PRECIOUS, CRYs_GEMSTONE

Secondary: BRONZE, STON_VOLCANIC, CRYs

Uncommon: WOOD

Human-sized draconic humanoids. Precious-material valuation, collateral, insurance, and social expectations are recurring hooks.

12. True vs Registered Species

SPECIES is biological species. RSPECIES is institutional/registered species. Normally they match. Wrong Species Certificate may split them; biological tendencies still use SPECIES, while institutional classification may use RSPECIES. Unregistered Species may make institutional species unavailable.

13. Authoring Principle

Species should be perceptible without turning the game into six separate campaigns. Shared endings should normally use species-specific variants rather than duplicate Ending IDs.
